

AutoFlex

WITH FLEXUNO

SPECIAL SPRING HINGES

Spring hinge with automatic opening

Inspired by the car key which opens just by pushing a button OBE developed a new spring hinge concept based on flexUno. In a special flex & front hinge combination with an integrated antifriction system OBE created the first spring hinge which can be opened just with one hand by pushing softly. Standard spring hinges with a double action snap into the open position at 50°. flexUno Autoflex opens automatically at 20° already.

Spring hinge

Matching parts

Front hinges for soldering	52-04170
Front hinges for welding	52-04070
Front hinges for plastic 90°	33-04024
Screws	99-02526

Benefits

- One hand opening
- Repeated function thanks to the anti-friction system
- No screw over tightening possible
- Available on flexUno in 4.3 mm
- Available for metal and plastic frames
- Special matching parts for plastic frames can be requested on demand

The Autoflex effect is created by a special designed front hinge combined with flexUno 4.3 mm.
